

***Package Content:***

- 1. One wall-mountable Command Centre*
- 2. Two (2) daylight, night-vision, motion detecting, wireless cameras*
- 3. Two (2) wireless and noisy police sirens*

***NB:*** Any additional wall-mountable Command Centre, Cameras and Sirens will be supplied clients on-demand and at extra cost.

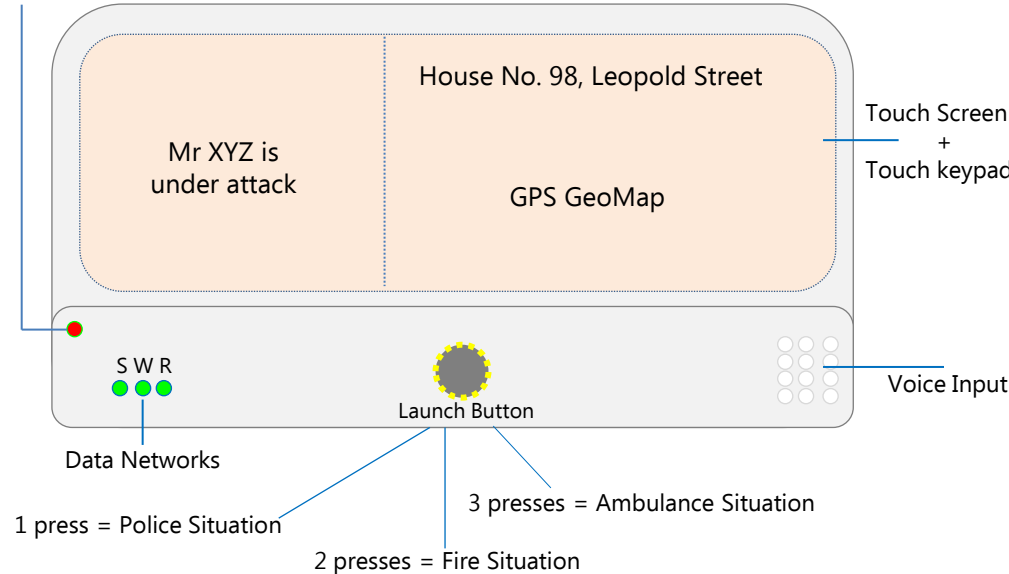

# Community Security Systems

*...neighbours watching over one another to ensure a safer community at all times*

A call placed to the SIM number or CODE can trigger the alarm, and the command centre will alert neighbours and first responders (i.e., police, fire, ambulance, etc) that the home is under attack. SIM Card will have a normal telco number as well as an alias neighbourhood CODE such that when called, all neighbours on the CODE will be alerted that an attack is in progress at the home where the alert is initiated from.

When an alarm is triggered, the neighbours on the CODE will all be alerted. Also, the neighbourhood watchdog (if any is available) will be reached. Finally, the country's appropriate first responders will be reached – i.e., nearest police station, nearest fire station, and/or nearest ambulance team.

State of Community (red or green)

Alarm can be triggered via a button press, or via a CSS Mobile App, or via a customized Voice Input Command

#### The Launch Button:

*On 1 press = robbery attack; the command centre will alert:*

- All neighbours in the vicinity or on the same CODE as the home that's under attack
- Neighbourhood watchdog (security post)
- Nearest Police Station or Police Patrol Team
- National Police Call Centre
- Hidden cameras get focused to record scenes
- Sirens in the home that is under attack are either muted or un-muted
- Neighbours' sirens make non-stop noises

*On 2 presses = Fire outbreak*

- All neighbours and the neighbourhood watchdog are alerted
- Fire Service is alerted

*On 3 presses = Ambulance needed*

- Friends and Relatives will be alerted
- Ambulance Service is alerted

*On a secret number of presses (e.g., 7) = abort all calls for help*

- Should presses go beyond this set secret number, the system will get locked – abort will be permanently denied until CSS RESET CODE is entered from the CSS Team's NOC or by CSS Field Technicians.

The Community Security Systems (CSS) Team may take over monthly rollover data bundling for all installed devices while home owners pay monthly support fees to the CSS Team. Alternatively, CSS Team may leave data bundling to customers – but this could be dangerous, since home owners may forget to ensure bundle availability at all times, thereby putting themselves at risks. Home owners will be allowed to make use of bundled data prior to their expiry, while a minimum bundle threshold is maintained at all times.

#### **Wall-mountable Command Centre Features:**

1. *Hidden full capacity Camera (daylight, night vision, etc)*
2. *Remote instructions receive and execute capability*
3. *16GB-1TB Storage Capacity (to store recorded files)*
4. *Voice command capability to secretly trigger the alarm*
5. *SIM capability (call to trigger alarm and send SMS alerts)*
6. *Wireless Fidelity (WiFi) capability*
7. *Radio Waves Broadcasting capability*
8. *Google Map capability (auto-send GPS GeoMap for help)*
9. *Strong battery capability (minimum, 9 hours on actions)*
10. *Main Power Supply connectable*
11. *Brute Force sensitivity (automatic triggering of alarm)*
12. *Hello; Emergency Response Mobile App auto-integration*

*The alarm will automatically be triggered when any of the sirens is hit hard (e.g., gun shot or brute force) or when forced to stop making noises (e.g., when covered).*

*When a Home is under attack, by default the sirens in that home will stay mute to help protect the lives of occupants when in hostage captivity. By keeping the sirens silent and secretly alerting neighbours, assailants will desist from taking out lives unnecessarily.*

*Nonetheless, if home owners think that changing this default feature to un-mute will be safer for the occupants, they may so have it changed.*

*Meanwhile, during an attack to a home, occupants may mute or un-mute the sirens however it pleases them without interrupting help which is on the way.*

*The various cameras will be installed hidden to all eyes until the alarm get triggered before they will quietly open-up (or surface) to record scenes. Meanwhile, when the home is intentionally armed, all cameras will remain surfaced on motion detecting mandate – and when the alarm is triggered, to record scenes.*

*Home Owners can arm their homes for unauthorized motion detecting as they retire to bed or as they leave their homes to work or to town. Once armed, an intruder's presence in the home will automatically trigger the CSS alarm so neighbours in the 1km radius vicinity could come out in their numbers to the rescue of the home which is about to be attacked.*

- *Power supply connectable*
- *Strong battery (minimum, 9 hours on recording)*
- *Supplementary storage capability should the main Command Centre be offline*
- *Optional dropbox integration (recorded actions)*
- *Motion detecting alerts optionally sent to your phone for self-alarm triggering actions*
